

Trillium GIS

A Comprehensive Mapped Manufacturing Dataset of Ontario

OCTOBER 2017

Changing Your Organization's Understanding Of Ontario's Manufacturing Landscape

Imagine you are in the commercial vehicle industry. You are interested in sourcing your wheel-end systems locally, but don't know where to start. With our geomapping application, you can easily search for suppliers based on product category, or by searching a specific firm. You can narrow the scope by company size and sales to find the perfect match for your needs. Once a firm is selected, an information panel with key information, website and contact information appears.

If you are interested in hiring the right skilled talent, you can search for college and university programs nearby. Again, clicking on the school will provide you with the information you need. Whether you're interested in the existing talent pool or want to look for potential educational partnerships for your organization, our application will empower you to make the best decisions possible.

Together, we can strengthen educational partnerships and attract investment using the power of data and technology to empower decision makers. Stay tuned for demonstrations of Trillium GIS and how your organization can use this tool to increase its understanding of Ontario's manufacturing landscape.

Data Includes:

Manufacturing Firms

Educational Establishments

Labor Pool information

Infrastructure Information

Ontario Certified Sites

What the Research Reveals:

Recent academic reports have identified a critical need for improved partnership between industry and educational institutions and a more sophisticated approach to investment attraction by government.
